Turtleskin CP Insider 400 Series

Fits Great Under Chemical Handling & Food
Preparation Gloves

INSIDER 400: Protection Area

TurtleSkin's CP Insider 400 series is a high performance cut and puncture liner glove designed to be used by itself or with a cover glove. Its lightweight nylon shell slips easily inside chemical handling gloves making it a very versatile glove option. They also can be worn under the shell of your favourite type of work glove.

The gloves feature 2 plies of our patented CP material offering great cut and puncture protection to the palm side of the hands. They are great for applications where workers face high exposure to hypodermic needles and other sharp threats.

With the CP Insider system, now any glove can include cut and puncture protection without compromising comfort or dexterity. These gloves are very breathable and comfortable, and because of the thinness of the technology, they maintain comfort even with an additional cover glove.
